

Enhanced Inventory Management

The Westinghouse Solution

Many nuclear utilities are struggling with high inventory levels and cost, while still facing vulnerabilities of not stocking parts critical to safety and plant operation.

Enhanced Inventory Management addresses these challenges by reducing inventory levels and associated costs. The service is a key element of the **OptiLife™ Service Center** which utilizes Westinghouse's industry-best data capabilities and engineering subject matter experts to optimize inventory for our customers.

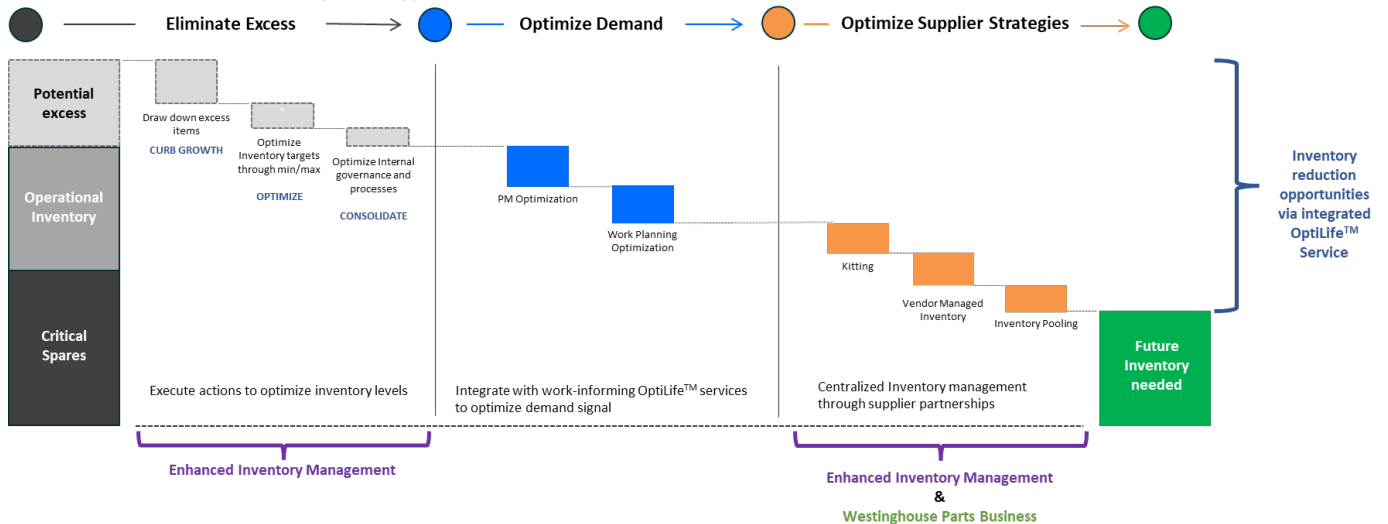

Enhanced Inventory Management Process

These primary steps outline the strategic approach to **Enhanced Inventory Management**, from discovery and problem identification through value realization.

Integrated Results

Enhanced Inventory Management, integrated with other Westinghouse solutions, results in an optimal and sustainable materials planning strategy.
